USER MANUAL

The user will start with the menu printed out to the terminal. The menu contains the following options:

1. **Help:** When a user enters '0', it explains to the user how each of the functions in the menu works.
2. **Set Date:** When the user enters '1', it prompts them to set the current date for the OS.
 - a. *Date:* when the user is prompted to enter the date, it should be in MM/DD/YY format.
3. **Set Time:** When the user enters '2', it prompts them to set the current time for the OS.
 - a. *Time:* when the user is prompted to enter the time, it should be in HH:MM:SS format
4. **Get Date:** When the user enters '3', it will then display the date the user has set in the system to the terminal screen.
5. **Get Time:** When the user enters '4', it will display the time that the user has set in the system to the terminal screen.
6. **Version:** When the user enters '5', it displays the current version of the code as well as when each version of the code has been completed.
7. **Shutdown:** Upon entering '6', the system will then launch the shutdown sequence which will ask the user if they would like to shut down with two given options that the user could input.
 - a. If the user would like to shut down, they type a 'y' and press the enter key
 - b. If the user is still trying to access the system they can enter 'n' which will bring them back to the menu screen.
